Chris,

Sorry for the delay in getting back to you on this.

If these are the only plugs that we are having a problem with, then I am OK with leaving them out of the skidtubes since the holes that are being plugged are so small. Seems weird to me that we've suddenly started to have a problem, but whatever.

Can I assume from your email that the rest of the plugs are OK?

Regards,
David

David,

When installing D3492-045 plugs into the 3/16" holes for D4168-043 Skidtubes (AS 350), the o-rings are ripping. See the attached photos for one of the plugs. The effected hole is section AU-AU from the attached pdf page. This is causing some of the plugs to fall out when handling them.

I tried a new plug (D3492-5) and new o-ring (NAS1611-005) with an unpainted D3890-5 spacer (0.197 ID) and could not get it installed without the same ripping. We enlarged a spacer to 0.206" ID and put a 0.220"x45deg c'sink (about the OD of the o-ring) hoping it would force the o-ring into the hole. It ripped less, but the o-ring just doesn't want to compress that much. Some of the o-ring always wants to squeeze out and it gets sheared off when you try to force the plug in (it takes a lot of force to get it in).

I don't know how we've been doing this in the past. We only noticed the problem this time during final packaging of the latest batch.

I could look at modifying the plug with a reduced tip to allow the next smaller o-ring (0.205" OD) to be installed. Or look at purchasing a one-piece plastic / rubber / silicone plug .

I'm thinking it would be best to just remove the plug. A partially sealed plug will allow humidity into the enclosed space, which can then condense if there's a temperature change. A plug might help trap that moisture inside that would otherwise dry out if left open. This is obviously the easiest and fastest solution that would allow us to ship this latest batch of tubes. It's also a minor change and probably wouldn't need a DSI.

With the chamfer and larger hole, it went in but partially ripped. Might get it to work but I doubt it will be consistent. We should talk about this tomorrow morning to figure out what we want to do.

Long term solutions: Could use a modified plug with NAS1611-004 (0.203 OD) o-ring, plastic or rubber plug with rtv.

The plugs I looked at have o-rings that are ripped.

I took a D3492-5 plug & NAS1611-005 o-ring from stock and tried it in a hole. I could not get it in by hand because the o-ring OD is just too big for the hole.

I tried the plug/o-ring in a D3890-5 spacer, unpainted from stock. I could only get it in with a rubber mallet. Doing so ripped the o-ring like I saw on the tubes.

I have no idea how we've been installing these in the past. You would have to uniformly compress the o-ring all around to get it in, and it just won't do that with the sharp edge of the hole.

My suggestion is to either chamfer the hole (0.220" OD x45 deg) and/or open the hole to be slightly larger than 0.197" (maybe 0.206"). We should try this on a sample piece before we drill any tubes.
